

A covid-19 crop circle - Appears on May 29, 2020 - with Transcript 7.22.21
Decoding its meaning and the intelligence that created it

[NOTE - Not all crop formations are fake. You can tell the real ones by the swirling and the weaving of the stalks and the weaving as they are laid down, and they stay intact and are not broken by rollers! This one looks real! And the tractor lines are usually 55 feet apart in England, for the watering pipes that are transported on wheels.]

Transcript

hi my name is Jared cross I'm a professor in California uh I wrote a book last year on crop circles only one book on crop circles but this caught my eye this was this is three weeks old and I thought whoa this is interesting I thought it was done with crop circles for a while but this is dragged me back my first thought was this is a hoax this is just made by human crop circle makers not a bad job in a farmer's field I didn't see any footprints leading to it or from it but I thought maybe this isn't a hoax maybe this isn't made by vandals look at look at this it is so well done now this this looks like an a landscaped garden in the middle of a farmer's field that was done in the middle of the night pretty good job and I was impressed by the precision and so what's the message here well I thought it looked like Cove in nineteen so let's learn a little bit about Cove in nineteen I'm a psychologist with a PhD what do I know about these things well I know that a Cove in nineteen has spiked proteins you see that purple spike so if you look at the crop circle you see nine spike proteins that is pretty cool now a covid nineteen also has what are called dimers these are little protrusions off the surface of the virus that has something to do with blood coagulation thrombosis and I noticed that this crop circle has three dimers those little stubs there so I'm getting intrigued for sure but I need to do a little home so that gives us background but here's a talk on those dimers OD dimers are also a danger here so my question though was wait a minute if these crop circle makers are making a cove in nineteen why did they get it wrong there's no blob at the bottom of the coronavirus from the scientific model what's that blob doing there that's incorrect so no blob at the bottom sorry on the other hand I started to think wait a minute maybe that is an elongation and a magnification so that you can look inside the spike protein that's the only spike protein in this in this crop circle where you can see inside so you can see inside eight little things in there so here's a little thing about the magnification of the virus which has been magnified by itself twelve then one recognizes it but the the actual elongated spike protein that you're looking at that has been magnified a hundred times more it's one to two nanometers somebody's holding up a magnifying glass to a spike protein so you can see inside okay those are eight little things we don't know what they're called yet these are eight little thingamajig okay wait this gets interesting but that's my first oh my god we are looking inside a spike protein at a something that's been magnified a hundred times more and those eight things are standing and looking at us in the eye beautifully done what is that what could they be what could they be I said so I started reading literature spike protein eight spike protein with eight some something with eight and actually I found in the literature SP eight spike protein eight and I said oh my god I've got to

discover here this is the little subscribe button they put in these videos so I started reading about spike protein a now this is a bit technical but please stay with me because this is totally exciting quote we propose this is in my scientific paper that comes with this lecture we propose that sp8 epitope should help in the characterization of mechanisms of virus Control and immunopathology that means sp8 is good it has something to do with immunizing us okay I'm gonna read I'm reading here from my paper in other words sp8 has something to do with antibodies and immunity stay with me now because this gets exciting and complex all at the same time SP 8 induces things called CTLs and a CTL is a type of cell that can kill cells infected with a virus CTLs quote will bind to the infected cell and often will be able to destroy it before it can release a fresh crop of viruses so the secret inside that Spike par team SB 8 is a secret to immunizing ourselves ok I thought you are such a genius this is amazing so the crop circle is showing us a magnified version of SP 8 which will teach us how to protect ourselves from the virus well hold on not so fast buster I realized that I was reading an article that was written in 2009 and I'm not a molecular biologist so would you stop Jerry and stop getting excited you're reading the wrong stuff this sp8 had an immunological function in SARS which was many years ago it was also a corona virus but you got the wrong virus pal and so I said to myself okay I quit yeah I'm over my head I'm giving up and then a little voice said don't give up why not ask some questions your professor asks some questions of professors so I wrote I mean if you're writing as professor a professor will write back if you're asking about crop circles you're gonna go in their junk folder but if you're asking about science they often will reply so I wrote to a professor and a couple of them and I said I'm a retired psychology professor and I was working on a piece of covid 19 only to find I am way over my head can you help me with the following question I know that SP 8 was found in another coronavirus sars and that it had a positive immunological function has SP 8 been found in covid 19 or as anyone looked forward okay I don't even know exactly what I'm saying but I sort of do I get a letter back from unnoted I'm not giving their names a noted biologist it's not every day I receive high GRE it's not every day I receive an inquiry from a retired psychology professor working on covid about a viral immunity question I'm also not sure why you chose me out of the universe of folks you could have asked about this but here's what I know the Kovach sequence available here indicates that SP 8 epitope from SARS to which you referred blah blah blah is indeed present in full in covid spike in covid in other words SP 8 was found in SARS but guess what it's also found at Gobind think about it think about what that means a second professor checked in and I said he said yes SP eight has been discovered in covid but we don't know if it has the same function as it has in SARS in SARS it had an immunological function but they don't know that yet on May 29th this crop circle appears showing us SP 8 but we don't know yet if it has an immunologic alert e that could save us it's what I asked if sp8 in koban 19 could be a positive sign and then it might have an immune function one of the professor's said it certainly seems like a lead worth following interesting so let's take this very slowly we are back to our initial discovery about this crop circle I'm gonna do this slowly because this is over my head and I imagine it's over your head the crop circle seems to be showing us a magnified version of sp8 which may teach us how to protect ourselves from the virus on May 29th when the crop circle appeared scientists did not know for sure if it had this wonderful immunological function in coded 19 that it had in SARS but they didn't say that they recently discovered it what's this crop circle saying that it did and that we should check it out and that might have life-saving properties so dumb question but I don't know what the eight stands for so I thought okay I'm gonna take another chance and ask a dumb question what's the eight stand for an espy eight well one professor writes back and says probably amino acids look long two three four five six seven eight or two sets of four the other professor said I think SP eight probably refers to a peptide we have different answers well amino acids make

peptides which make proteins so you may be looking at eight amino acids or you may be looking at one peptide inside that spike protein this is really getting cool all right in short we are asked to look inside a magnified piece of a spike protein and what we are looking at has an immunological function in SARS and maybe it has that in covert 19 and the eight thingamajigs are magnified amino acids or peptides I'm going slow because we need to go slow because this is really heavy-duty stuff there are our little eight thingamajigs that of course is my second oh my god so there are peptides currently that are being studied to treat covid 19 sold not died Solnit I'd evicted ill losartan de peptidase these are some of the newest treatments looking at peptides and how you treat covid 19 so are we done is there more to discover about this crop circle well we haven't talked about the center of the crop circle or the center of the virus so you are actually now looking at the insides of the virus okay you got three little things and then three bigger circles so here's a little investable what do we know about the virus coronaviruses received a name from the appearance in electron micrographs red pronounced spike like protrusions create the effect of a corona Latin for crown the genetic material inside the corona virus is RNA and the entire genome is almost 30,000 bases long Peck for the virus to replicate however it needs to insert its RNA into cells and hijack the cellular machinery to produce new viruses okay so we know inside the body of the virus is RNA and RNA is a made up of three letters a sugar a phosphate and a base now check this out this crop circle is showing us three little circles inside the virus inside the body of the virus and the only thing we know that goes on in the inside of the body of the virus is the mechanisms of RNA which is made up of three letters so are those three little circles representing three letter the three letters of RNA well it sure looks good doesn't it but what we don't know here's that was easy but what about the big circles okay RNA encodes what are called non structural poke see so this is a big learning curve I don't know what I'm talking about NSPS non-structural proteins are encoded by RNA so are those larger circles NSPS okay that's the question we're asking that is that an MSP is that an NS p is that an NS p NS p 3 for example is a killer now obviously there's the 3 associated with it so I was attracted but then I learned there are like 1519 EMS P's most of them are terrible then SP 3 for example refers to a large multi domain protein which makes this virus highly contagious it is a replication transcription scaffolding protein there's a picture of it over to your right and that's not good all these NSPS are not good they're killers University of Michigan study thought that n sp3 was a good candidate for a vaccine that was interesting well we're onto something but if we're talking about n sp3 why are you showing us 3 balls if this is an extraterrestrial crop circle and et is showing us n sp3 why are you doing it three times you got three large balls in the center not one so I thought well it's I'm not reading this right are there more NSPS well yes there are in sv 15 is also a very bad dude the newly mapped protein MSP 15 was thought to directly participate in viral replication but more recently it was proposed to help the others it was proposed to help the virus replicate possibly by interfering with the hosts immune response so MSP 15 helps shut off our immune system thanks a lot all right some of these discoveries that I'm making that I'm discovering seem to be published about the same time or even after the crop circle appears there that new here's an article I one of the hard things that I'm looking at I don't understand it but I do notice that it was published June 10th that's two weeks almost two weeks after the crop circle appeared so seems like this crop circle is on kind of the cutting edge of science a little bit ahead of it but there's another NSP I discovered called NS p5 now look at this article that I'm attempting to read it may as well be in Chinese I don't understand anything like and induce dimerization of middle e ba bla okay but I've noticed are ting to learn to read between the lines and I notice that this is about NS p5 and it's about antivirals okay NS p5 could be a target for an antiviral and I'm also noticing that that was published five five years ago that was about a different corona virus so does anybody know anything about NS p5 here

well time to write another email here comes another email this goes to a virologist I've been reading about NS p5 and it looked like a good candidate for a therapeutic in SARS and mares has anything similar been said about NS p5 in covid 19 that's a legitimate question the answer come these back from my scientists is I haven't heard anything like this so is this crop circle suggesting that we look at NS p5 in covid19 okay there are other possibilities you notice that these three large circles kind of make a triangle are we talking about nonstructural proteins in three different locations some of these scientists who write to me are talking about the location of NSPS so I'm lost but I'm on I'm on the trail of something so you must be dizzy I certainly was dizzy so let us take our time and put together what we have learned okay what we have learned about the center body of this crop circle is those three little circles probably represent the three letters of RNA which manufactures which encodes these dark NSPS all right and we have speculated that those three larger balls could be an NS P in three different locations or NS p3 or NS p3 v or MSP 15 one doctoral student at Stanford University who I paid money to to review this talk and not to the review my article said some of these NSPS have never there's no science on them yet so that's very very interesting so in the best of all worlds there would not be a psychologist with a PhD doing this we would have microbiologists and biologists and virologists and epidemiologists and medical doctors looking at this crop circle and not afraid to speculate about what it might be saying oh but if you say it's coming from ET or an extraterrestrial source of course you're crazy well that's the stigma there's a professor named Richard Taylor a brave physicist who says quote there's a huge amount of rigorous fundamental science that could be got out of this research but many scientists are put off getting into crop circles because they're considered a crazy thing indeed they are so you're left on your own to your own devices so what have we come up with on our own well here's what we've come up with and this is a summary very slow this crop circle is showing us the virus at 12 million times magnification number one it is showing us nine spike proteins to look number two it is showing us three dimers that has things to do with blood coagulation thrombosis strokes its most important feature in my mind it is showing us an a magnified version a hundred times magnification of SP eight an array of a spike protein inside of which we see eight amino acids or one peptide SP eight was found to have an immunological property in SARS it was recently identified in covid 19 but when this crop circle appeared scientists were still not sure that it had an immunological property in covid 19 the cuff Circle seems to make that suggestion it also is telling us that the inside the body of the virus we see three letters of RNA and these three letters encode non-structural proteins that are extremely dangerous to the human race okay and we don't know exactly what they are now in my book messages from the gods which I'm not talking about here I attempted to translate some crop circles which I thought were messages from extraterrestrial sources called me crazy if you will so I would like to translate this crop circle into English okay imagine you just got an ET message from an extraterrestrial source here's what it is saying in English okay quote you are currently suffering from a planetary wide viral pandemic in order to make progress against this illness concentrate your efforts on non structural proteins and their associated RNA mechanics which replicate the virus you should also study the distribution of amino acids and peptides in Spike proteins to help successfully immunize your species from the widespread more County which will otherwise follow thank you ET okay now I'll get to this I'll get to your doubts and skepticism in a minute but what you're looking at is a time line on the bottom you see brown covid xix these are all the diseases the leading causes of death on planet Earth as we speak and you see by March 6th COVID is racing up to the top it is the third then it is the second largest killer and by the beginning of May it becomes almost the largest killer and here we have the crop circle appears now okay COVID 19 has become the leading source of death on our planet alright so as this video is being made there are 10

million cases of COVID 10 million infections and 500 thousand deaths all right now there's a doubling time of 5 weeks we have to stop this doubling time with vaccines with shelter in place with quarantines with therapeutics we have to break this pattern because if we don't there will be 20 million infections by early August and there what's even worse is there will be 1 billion infections by February and 50 million deaths by February now 50 million deaths by February is as bad as the Spanish flu was in 1918 and it is also as bad as World War 2 was so we're going to have the end of World War 2 by February unless we can break this doubling time and I'm not just making this up this is from the BBC the International Rescue Committee warns of a billion cases the IRC Rhett warns of a billion corona buyers cases it's not something that I'm just extrapolating on my own so we need to overcome our biases about crop circles I wrote this short book it's a white paper I mean it available for like a dollar seventy-five it's got all the science in it on there all the references it's much more detailed than this talk we need to have a consortium of scientists and crop circle scholars look at this this is not the final word this video we need to have people look at this seriously and look for clues and improve the knowledge base about this message that we have received it is very important and very relevant to what is happening to us now okay so that's why it should be purchased and distributed and this video as well and get into the hands of the right people PhD in psychology is not being in the hands of the right person now I have a postscript to P I have a lot of intelligent friends who said Jerry I'm sorry crop circles are always made by humans there are not there's nothing about et here all right so I would like to address my friends who are skeptics who often are very very intelligent people but they have a bias they don't consider it a bias that of course these are not extraterrestrial messages fine here are a couple questions I'd like to ask my intelligent friends one do you really think that this crop circles about Cova 19 spike proteins dimers RNA non-structural proteins amino acids and peptides I imagine they would say yes I agree with that but they it was made by humans not by et fine this is question number two are you aware that the knowledge of sp8 was incomplete at the time of this crop circles appearance okay we didn't we knew that it existed in covid19 but we didn't know if it had an immunological function like it had in SARS so this crop circle is a head of our science okay you admit that okay you admit that fine three are you aware that the knowledge of NSP three and five and 15 were also extremely new at the time this crop circle appeared one professor said he hadn't heard anything about NSP five being a target for a vaccine or a therapeutic do you have grant that you granted that that's great now the final question I have it are you aware that some of this research had not even been fully published at the time this crop circle appeared on May 29th one study was published three days after the crop circle was first noted you can see that in my article all right you're willing to grant that - fine but you're still married to the idea that humans had to make this so let's take a look at your theory just a little more carefully you have to admit the people who made this crop circle are really really smart right yes good okay and you have to admit that these people knew their science better than some of the state-of-the-art scientists knew at the time right and these people seem to care about the human race because they made this beautifully articulate and wonderful piece of landscape art they must have some interest in saving the human race right to get things down to the amino acids alright that's your theory so far but they envelope we have to also add then you don't just make it us in the middle of the night without rehearsing they had to go somewhere and rehearse making this this takes a lot of time and you don't just do those eight little Tufts for the first time in the middle of the night in the dark you had to rehearse it somewhere right your team okay so they did it all in the middle of the night I did it they're humans they care about humanity but they also covered their tracks you don't see any footprints why did they do that they want to hide the fact that humans did it why aren't there any tracks leading to or from that crop circle why did they go about hiding their tracks

so these people that you're talking about these humans they are also vandals they are also people who cost the farmer three thousand dollars in crop damage they're also people who enjoy pulling off a hoax and deceiving people this is where your theory falls apart this is a huge serving of cognitive dissonance okay you've got two opposing things going on at the same time which is maddening let's take a look at one more time they care enough about humanity to know the science that will they rehearse their crop circles so precisely that they captured the amino acids in four pairs in perfect little Tufts inside a spike protein they magnified a hundred times and yet they are deceptive criminal trespassers and vandals who enjoy a good hoax right in the middle of a pandemic okay that is your human construction theory and you need to think about that and if you'll pardon an opinion that is now how this crop circle was made and that is not who made this crop circle thank you very much for watching.

The Covid-19
Crop Circle

Appeared
on May 29,
2020

Decoding its
meaning and the
intelligence that
made it

Jerry Kroth, Ph.D.

We need to overcome our biases
about crop circles

Need crop circle scholars and
scientists to add to the knowledge
base
