Subject: Can't get Ivermectin?

Hi -

Dr. Osborne here,

In the last several months, the popularity of Ivermectin has skyrocketed. The big question is why...why does an anti-parasitic medication work so well against a virus? For that matter, why do other anti-parasitic drugs also work against The Disease That Should Not Be Named (TDTSNBN)?

I won't go into that today, but I do think there are some things you need to know about Ivermectin. My oldest son used it and recovered from TDTSNBN in only a few days with no side effects.

To date, there have been 120 trials with more than 47,000 patients using this anti-parasitic drug to treat TDTSNBN, and the results are overwhelmingly positive. So positive in fact that Ivermectin is currently on a 5 month back order in most pharmacies around the US.

That's because smart doctors and smart people like yourself are reading, researching, and asking for this very safe and effective treatment.

Many of you have been writing in, asking about what you can do to keep your immune systems strong. Many of you have also asked what to do if you can't get Ivermectin.

Though I can't give you medical advice, I can share with you what my family and I are doing to support awesome immunity:

Vitamin D – I take 5,000 IU daily.

I would take 10,000 IU daily if my vitamin D levels were low
(simple blood test can help determine this).

Vitamin C – I take 5 grams of this in divided doses daily.

Zinc – I take 2 of these daily.

Quercetin – I take 2 of these daily.

NAC – I take 2 of these daily.

Mixed immune support with vitamin A, elderberry, Andrographis, lysine, echinacea, and more. - I take 2 of these every day.

...And here is what I would do if I came down with the disease that should not be named (TDTSNBN):

I would take everything listed above. I would also reach out to my family doctor to get ivermectin. If ivermectin could not be acquired, I would take 4 of these daily - Intestinal Defense.

The key active ingredients have been used for thousands of years for their anti-viral, anti-parasitic and anti-inflammatory properties. They include sweet wormwood and artemisinin.

Artemisinin is one of many compounds derived from wormwood. Its discovery earned a shared 2015 Nobel Prize in Physiology and Medicine with ivermectin. Recent in vitro human lung cell studies show that wormwood extracts including artemisinin inhibited the virus that causes TDTSNBN.
