How not to catch the 2019 Novel Coronavirus (2019-nCoV) - Selenium

The only people that can be infected by the 2019-n Coronavirus have less than 98.7 µg/L of Selenium in plasma or serum. Those who have enough Selenium are immune to this and all other enveloped viruses. Selenium can be obtained from Brazil nuts, Selenium pills or Astragalus tea. This is why only some people get the flu and why others get it infrequently or never at all. We only found this out in 2015 when Lipinski @ Harvard figured out why some people were immune to Ebola, a fact well documented in medical archives. Two Brazil nuts a day will do it. An Asia astragalus tea is the primary source of selenium.
