KILLING VIRUS AND BACTERIA USING NANO BUBBLE TECHNOLOGY

I am writing this paper hoping to bring this new technology knowledge to the world. I chose to not make any financial gain from this information and to be anonyms.

To will try to give you, the reader, a point of reference to understand this paper - I suggest that you look at the work of Dr. Keshe. Go to YouTube and type in: keshe, Knowledge seekers work shop #318. There he explains the principals behind his principals of Nano technology.

I will try to explain as best I can so you can understand what I am talking about.

A virus or bacteria is a Nano unit ball of energy. It needs energy for food so when it enters your body it clings on to one of your cells and feeds off of it and then goes on the next cell.

In this technology, we are giving the virus or bacteria a more desirable energy source to feed on. When you take a drop of the nano water in a quart of water, there are trillions and trillions of Nano bubbles. The virus or bacteria let go of the cell and cling on to this plasma energy bubble. When the virus or bacteria cling on to the Nano bubble we create with this system, it brakes and the ozone inside the captured bubble destroys the bacteria or virus.

This technology is so easy to use and to make with little cost and is very effective in assisting the body to combat viral and bacterial attacks. The following is how to make your own Plasma Ozone Nano bubble machine. I have numerous associates that have found that this really works.
PARTS YOU WILL NEED:

1. One Van de Graff static electricity generator (best one to buy is from www.sci-supply.com (or from Amazon.com)). Go to the search engine and type in Van De Graff and the cost is $295.00 with free shipping.

2. One stainless steel pot with a tapered bottom with the bottom measurement of 9 3/4 inch and the outside pot measurement of about 10 in. This may be the most difficult to find.

3. One ozone generator from eBay. I suggest: IOG Ozone Generator Ionizer Air Purifier Quartz Tube Water Treatment Equipment, cost about USD 44.00 https://www.ebay.com/itm/10G-Ozone-Generator-Ionizer-Air-Purifier-Quartz-Tube-Water-Treatment-Equipment/193380859356?hashitem2d0665bddc:g:158AA0Sw-F1ea4bA

4. One Air Stone Nano bubbler stone Diffuser. Best from eBay:

   Air Stone Nano Bubble Stone Diffuser Ultra-High Dissolved Oxygen Aquarium about 8 inches in diameter (20 cm), about 1 inch height (such as by Vivosun)

   Item price  About USD 25.00

5. One small oxygen tank or oxygen machine for breathing used for breathing and set it for 2 liters per min.
Directions:

1. Take off the top half of the Van de Graff generator and place the stainless steel pot in top of it.

2. Hook up the oxygen to the ozone generator and to the Nano bubbler stone diffuser and place it into the stainless steel pot.

3. Put in one gallon of distilled water, (very important – to use distilled water).

4. Start the oxygen, ozone generator and then start the generator, and leave the room. Let it run for 10 minutes. After ten minutes, come back in the room and turn off everything and get out of the room and do not breath the ozone in the air, it can burn your lungs. Now you have trillions of Plasma ozone Nano bubbles in the water.

Special Note: Do this process in a small room with plenty of ventilation. Get out of the room and hold your breath while in the room. The Ozone can damage your lungs.
How To Use:

1. Use one drop of that water in a quart of water and drink that everyday only as a preventive during an epidemic. Drink 2 quarts of this water per day if you get a disease. Use no more than one drop for every one quart of water. This is very strong and you do not want to overdo it. More is not better.

2. One can use this another way which is to use one drop of the concentrated Nano water on the third eye, which is along the governing vessel in Chinese medicine. Do this once a day for preventive, use 4 times a day for 10 days if you contract the disease.

Enjoy your new health against all viruses and bacterial infection.
