Update - 1
1. If you have a runny nose and sputum, you have a common cold.
2. Corona virus pneumonia is a dry cough with no runny nose.
3. This new virus is not heat-resistant and will be killed by a temperature of just 26-27 degrees C.
   It hates the Sun.
4. If someone sneezes with it, it takes about 10 feet
   Before it drops to the ground and is no longer airborne.
5. If it drops on a metal surface it will live for at least 12 hours -
   So if you come into contact with any metal surface – wash your hands
   As soon as you can with a bacterial soap.
6. On fabric it can survive for 6-12 hours.
   Normal laundry detergent will kill it.
7. Drinking warm water is effective for all viruses.
   Try not to drink liquids with ice.
8. Wash your hands frequently as the virus can only live on your hands for 5-10 minutes,
   But – a lot can happen during that time –
   You can rub your eyes,
   Pick your nose unwittingly and so on.
9. You should also gargle as a prevention.
   A simple solution of salt in warm water will suffice.
10. Can’t emphasize enough – drink plenty of water!

Update – 2

THE SYMPTOMS
1. It will first infect the throat, so you’ll have a sore throat lasting 3-4 days
2. The virus then blends into a nasal fluid
   That enters the trachea and then the lungs, causing pneumonia.
   This takes about 5-6 days further.
3. With the pneumonia comes high fever and difficulty in breathing.
4. The nasal congestion is not like the normal kind.
   You feel like you’re drowning.
   It’s imperative you then seek immediate attention.

Update – 3

The new Corona virus may not show sign of infection for many days.
How can one know if he or she is infected?
By the time they have fever and or cough and go to the hospital,
The lung is usually 50% **Fibrosis** and it’s too late.

**Experts** provide a simple self-check that we can do every morning.
Take a **deep breath** and hold your breath for more than 10 seconds.
If you complete it successfully without **coughing**, without discomfort, stiffness or tightness, etc.,
It proves there is no **Fibrosis** in the lungs, basically indicates no infection.

In **critical time** self, please self-check every morning in an environment with clean air.
Everyone should ensure your mouth & throat **are moist**, never dry.
Take a few **sips** of water every 15 minutes at least.
Why?
Even if the virus gets into your mouth, **drinking water**
or **other liquids** will wash them down through your throat and into the stomach.
Once there, your **stomach acid** will kill all the virus.
If you **don’t drink** enough water more regularly,
The **virus** can enter your windpipe and into the lungs.
**That’s very dangerous.**
So, **please do everything** to ensure your safety during this pandemic.
