

Commentary by Patrick G. Bailey, PhD, President, Institute for New Energy

On Dr. Tom Valone's Paper

BREAKTHROUGH ENERGY TECHNOLOGIES
DERIVED FROM NEW PARADIGM SCIENCE

Hyo Jeong International Foundation for the Unity of the Sciences

Third International Conference on Science and God (ICSG III), Session 2

S. Korea, April 9–11, 2022

Dr. Valone is correct in all of his points in his paper.

We need to clearly understand all of his information and his conclusions – especially about the effects of increasing CO₂ on global warming. SO PAY ATTENTION!

God, Nature and FE Devices

God by definition is the driving force on our Earth and on us. Although we cannot see God, we can see the effects of God in our world. What we see is what we call Nature.

We study Nature to understand how things work, and we make laws of mathematical equations to describe what we can see. We can use these math models to predict what we see and could see – inside of our limited understanding – inside of our “box”. (Draw 9 dots in 3 rows of 3 each. Draw a box around the dots. Now connect all of the dots using 4 straight lines while not lifting the pen.)

We should NOT use such models to say that we cannot expand our understanding!

New surprises are found when we do research “outside of the box”! Examples of impossible inventions are steam powered cars, airplanes, and nuclear reactors.

A “Free Energy Machine” or an “Over Unity Device” is a machine that appears to produce more energy that it uses to run. Of course energy cannot be created or destroyed – and it can be converted from one form to another – such as from potential energy to energy used for work. Examples of such devices are dams, explosives, and nuclear reactors – which convert God's given potential energy into useful energy. For any new FE or OU device – you won't understand how it works! Because it is new!

There is now a real need for such for new devices to solve the growing problems of: global warming; the decline of bee populations, and the loss of drinkable water!

Past Research and Conferences

The Integrity Research Institute is an example where there has been a lot of research on FE and OU devices. There also have been other groups that have been researching these fields, such as the International Symposium on New Energy in the 1990s, and the Institute for New Energy since 1994 to date. The INE Website was frozen in Dec 2003

due to US Patriot Acts I and II - so as to not convey any "new technical information to the enemy." The INE website contains a list of conferences, past papers, and a review of a lot of FE and OU devices being studied at that time - also sorted by their names and commercial status. It is still up at <http://www.padrak.com/ine/>. Research is still continuing, and as these topics are considered "fringe topics", funding is hard to find.

Progress is Still Being Made

Research into these topics is still presently being made by academia and industry. And – the research is all open and unclassified – up until a point. If the research is made under a US government or agency contract – the project and the results can become quickly classified. This has happened to a number of researchers in the academic, university, national, and even private laboratories. A good example is the Beta Cell Battery developed by Paul Brown, and presented at the 1991 IECEC in 1991 (his paper is on the INE website). He showed that a resonant circuit could take the electrons from a beta-decay isotope (Sr-90 in this case) and convert the electrons to work in a small "nuclear battery". His research was shut down, he was arrested on false charges, and he was placed in jail for two years. And - his invention is now being worked on at Sandia Laboratories. Even with minor setbacks – progress is still being made.

Problems with Getting New Energy Devices Funded and Released

Yes - there are still major problems. Such research is not being suppressed by the government – rather it is being heavily suppressed by the National Defense Networks. It is a known fact that when a patent application is submitted to the US Patent Office, it is reviewed by a group of military staff, and if anyone thinks that that method or device under that application can be used to give the US an "advantage over the enemy" then that patent is immediately CLASSIFIED! On one hand this is good and stops the spread of such technology to "the enemy". On the other hand, that technology is never made public - and the price of gas is still going up! There are thousands (!) of such patents that have been classified, and the inventors are told to send in all of their material and to never discuss their technology under pain of fines and imprisonment. This is happening!

Funded Black Programs

The problem with such advanced technologies that are classified is that they never or very rarely get released to the general public! They do not see "the light of day." They are held in "Black Programs." They usually sit in a safe somewhere, and military personnel rotate into the office and then leave in a few years to a new assignment. The technologies get buried! If the military decided to use a technology, they could! So – by and large – the technology that was discovered – just disappears! Is this for the good of the nation? For the future of the nation, or the world? Or does it finally reappear in another country after the "men in charge" have retired? They could also release it to certain corporations who would then market it to the general public. If some of this technology can be used to solve the now pressing problems of global warming and finding fresh water supplies – then it should be released in a win-win corporate business model NOW!

New and Exciting List of Additional Devices (Under Study)

There are a lot of interesting “Free Energy” machines and Over Unity” devices that have been shown - or are reported to have been shown - to actually work! Even if they are small, they do demonstrate a “New Principle of Nature” that could be expanded and enlarged into a working power plant for your house or community! A number of them are listed and cross-referenced by name and by commercialization criteria at the INE website www.padrak.com/ine/db/DEVICES.html - where each device has its own data page with all of the data available for that device at that time (* not on the INE website):

* Bessler’s Gravity Wheel (1717) (Also shown on a recent Tic Toc video) (Now being computer simulated to find specific parameter solutions for operation)

* Tartaria (Country) Earth Energy Electrostatic Energy Grid (mid 1800s)

* Hans Coler Current Generator (Wire-wound magnets, with current flowing into the six magnets in a hexagon design, said to have powered submarines in WW II)

Beta Cell Battery (1991 IECEC paper by Paul Brown)

Davis Tidal Turbine (Davis, Barry) (Built and tested in Florida 1997)

Harmonic Frequency Generator Circuit (Ewing, David & Walt Myers) (1994)

Patterson Power Cell - (Patterson, James) (US Patent given for "Cold Fusion" 1997)

High Voltage Solar Cells (Sater, Bernard) (1990)

Triple Junction Solar Cells for Terrestrial Use (Used in US Military Satellites) (Now)

Moray Radiant Energy Equipment (Moray, T. Henry) (Experiments in 1910)

Capacitive Discharge Motor (Gray, Edwin V.) (1970)

Capacitive Discharge Motor (Ide, Osamu) (1995)

Catalytic Hydrogen Collapse (Mills, Dr. Randall) (Black Light Power 1998 !)

Finsrud Motion Machine (Norway) (Finsrud, Reidar) (Perpetual Motion Model ! 2000)

Jefimenko Electrostatic Generators (Jefimenko, Oleg) (1993 book)

Sonofusion Reactor (Roger Stringham) (2001)

Swiss ML Converter (Switzerland) (Baumann, Paul) (1980s Working Model!)

Crystal Energy Converter (Hutchinson, John) (1994)

Hope For The Future – How We Can Make It Happen

Before now, we could rely on the world’s supply of oil - and the backing of the US dollar - through the cost of oil, known as “Petro Dollars”. As long as oil flowed into the world and into the US economy, the dollar was supported and the economy was strong.

Therefore, anything that threatened that flow and use of oil in the US was suppressed! Taken away. Made secret. Classified! However, the rising amount of CO2 that is caused primarily from this continuing burning of oil is attacking our environment more and more!

If this increasing CO2 trend continues, it could threaten our way of life, our Nature, and probably the Earth's various civilizations – All of them! We need water. We need food. We need energy. Just not the kind of energy that results in continued and increasing CO2 production into our atmosphere!

We need to discover new forms of potential energy and develop the proper transducers to convert that existing potential energy into useable energy! The experiments and devices listed above are a good starting point! Plus – We need to declassify existing US patent applications and get those technologies into the public sector. There are thousands of them! Now some of these devices have been found to lose weight when they operate. So one rule (at least) will be that any antigravity devices or effects will not be released into the public sector. Some of the devices themselves may also be too dangerous to be released into the public sector.

There Is A Simple Solution

Create research teams to scan these black project technologies and apply them to making usable energy for our public energy grids. Corporations can be formed to build these devices away from the public sector – and – Place them inside of existing nuclear plant security fences where they can be isolated and protected! This is a win-win situation for the military, the power companies, for the nations of the world, for global warming, and perhaps for our very way of life - and perhaps for our very own future existence!

Ask For It! - Seek These Solutions! - Knock On Doors!

We can all work together and make this happen!

US President Ronald Reagan said in 2013 -

“I occasionally think how quickly our differences worldwide would vanish if we were facing an alien threat from outside this world.”

We do not need “an alien threat”!

WE HAVE MADE OUR OWN THREAT – and it exists from above!

The increasing CO2 levels into our atmosphere – and - We had better recognize and stop this threat NOW! All informed scientists and the United Nations agree!

So - What are YOU going to do?

Unfortunately THIS is not a movie. This is not going to go away.

God and Nature would say:

This is REAL – Happening to you TODAY!

Now you know the Problem, the Consequences, and the Possible Solutions. FIX IT!

HELP US FIX IT!

Thank you.
